Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

A. Claim 1 is a method for determining a write strategy for recording data on a medium, classified in Class 369, subclass 59.24.

B. Claims 2 and 15 are drawn to an apparatus of a recording medium having data blocks written on it and blocks are written using set of write symbols, classified in Class 369, subclass 59.13.

C. Claims 3-13, 16-29 are drawn to a method for recording data and mapping data with write symbols of different size, classified in Class 369, subclass 53.33.

D. Claim 14 is drawn to a method for determining a write strategy for writing and reading from a read/write channel, classified in Class 369, subclass 59.23.

Inventions A and B are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the apparatus does not require a disk having additional audio in a CD-ROM portion. The subcombination has separate utility such as writing data blocks using write symbols.

Inventions A and C are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the

particulars of the subcombination as claimed because the apparatus does not require a disk having additional audio in a CD-ROM portion. The subcombination has separate utility such as mapping data to write symbols which represent more than one bit.

Inventions A and D are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the apparatus does not require a disk having additional audio in a CD-ROM portion. The subcombination has separate utility such as writing and reading data from a read/write channel.

Inventions B and C are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the apparatus does not require a disk having additional audio in a CD-ROM portion. The subcombination has separate utility such as mapping data to write symbols which represent more than one bit.

Inventions B and D are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the apparatus does not require a disk having additional audio in a CD-ROM portion. The subcombination has separate utility such as writing and reading data from a read/write channel.

Inventions C and D are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and

(2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the apparatus does not require a disk having additional audio in a CD-ROM portion. The subcombination has separate utility such as writing and reading data from a read/write channel.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

2. A telephone call was made to Mr. William James on August 25, 2003; to request an oral election to the above restriction requirement, but did not result in an election being made.

NOTE: Mr. James requested that a formal restriction be sent out for examination of the client.

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
4. A shortened statutory period for response to this action is set to expire **1 (one) months and 0 (zero) days** from the mail date of this letter. Failure to respond within the period for response will result in **ABANDONMENT** of the application (see 35 U.S.C. 133, M.P.E.P. 710.02, 710.02(b)).
